SYSTEM SOLUTION

## Border surveillance and control

### System solution

A total solution for minimizing enemies threats and activities along the border to intercept, detect and track of any intruder crossing the border. In addition, the system will support the law enforcement forces to conduct the identification and interception of the intruder. This solution is featured on the back page.

### Features

- Prevent illegal entrance and control the illegal traffic and particularly drug trafficking, smuggling and immigration along the border.
- Detect any ground activities and motions and locate their position.
- Classification of the targets (pedestrian, vehicles) and location of the target according to the Border Line.
- Setting up and display on a geographic map of the general situation of the surveyed area.
- Command and control of the action
